PROFESSIONAL SUMMARY

Analytically-driven engineer turning large-scale transactional data into decision-ready insights. Proficient in SQL, Python, and data-driven problem solving, with hands-on experience in data extraction, cleaning, query optimization, and ML-based pattern detection. Comfortable owning a problem end-to-end — from data acquisition and analysis through build, validation, and presentation of results.

EDUCATION

Bharatiya Vidyapeeth College of Engineering, Pune, Maharashtra
Bachelors of Technology in Computer Science and Engineering

December 2021 - June 2025
CGPA: 9.54/10

Gyandeep Higher Secondary School, Janjgir
State Board Higher Secondary Education

Apr 2018 - Mar 2020
Percentage: 88.2

EXPERIENCE

Programmer Analyst Trainee | Cognizant Technology Solutions

September 2025 - Present

- Analyzed high-volume transactional insurance data using SQL Server to identify processing bottlenecks and data quality issues, feeding findings into backend workflow redesigns that improved downstream reliability.
- Built and operated data-driven REST APIs, continuously monitoring performance metrics and usage patterns to surface actionable insights for engineering and business stakeholders.
- Queried and optimized large relational datasets in SQL Server, improving extraction and reporting efficiency for enterprise insurance workflows.
- Implemented OAuth 2.0 authentication (Okta) and role-based access control, ensuring data governance and adherence to organizational security and compliance standards.
- Automated CI/CD pipelines using Jenkins and CloudBees, reducing deployment effort by 30% and enabling faster, data-backed iteration on production releases.

Programmer Analyst Trainee Intern | Cognizant Technology Solutions

May 2025 - September 2025

- Built a scalable, multi-user web platform from the ground up using ASP.NET MVC, Entity Framework Core, and SQL Server — owning data modeling, architecture, build, and deployment end-to-end.
- Designed a standardized data layer using Repository and Service Layer patterns, improving query consistency and reducing complexity for downstream data access and reporting.

PROJECTS

Traffic Flow Optimizer [Python | YOLO | Flask | Data Mining | Real-Time Analytics | ML Algorithms]

- Built a real-time data pipeline combining YOLO-based machine learning inference with a Flask REST API backend to extract and analyze traffic pattern data for decision automation.
- Engineered adaptive signal-control algorithms using data mining and real-time analytics on live traffic data, translating raw sensor data into actionable, automated decisions.

Virtual Art Gallery Platform [C# | ASP.NET MVC | Entity Framework Core | SQL Server | REST APIs | CI/CD]

- Architected a scalable multi-user web application with a structured relational data model supporting personalized galleries, virtual tours, and content management for concurrent users.
- Standardized data access through a reusable Repository Pattern and Service Layer, improving query consistency and reducing time to implement new reporting and feature requirements.

CERTIFICATIONS

- **Future Skill CDAC** Course in Artificial Intelligence
- **Great Learning** AWS for Beginners
- **Flipkart** participated in the Level 1 E-Commerce and Tech Quiz of Flipkart GRiD 5.0 - Software Development Track.

SKILLS

Programming & Analysis: Python, SQL, C#, C++, JavaScript

Data & Analytics: SQL Server, MongoDB, Data Extraction & Cleaning, Query Optimization, Large-Scale Data Processing, Data Mining, Exploratory Analysis, Machine Learning (YOLO/Computer Vision)

Backend & Systems: ASP.NET Core, REST APIs, Microservices, Scalable Architecture, Entity Framework Core, ADO.NET

Cloud & DevOps: AWS, Azure (Basics), Git, Jenkins, CloudBees, CI/CD Pipelines

Security & Compliance: OAuth 2.0, Role-Based Access Control (RBAC), Data Governance, Software Security Standards
